

Stacking Warehouse Rack

Installation Steps

1

stand up one up right, put the beam buckle catches it, show as picture

2

connect the other upright in the same way

3

install the rest beam ,you can adjust the height according to demand

4

finally put the metal layer in the beam

Brand Name	YIYI Warehousing
Place of Origin	Zhejiang, China
Material	High-quality steel
Product name	Stacking Warehouse Rack
Weight Capacity	500-5000kg/layer
Surface	Electrostatic spray surface
Thickness	Customized
Product size	Customized
Color	RAL System
OEM&ODM	Support

Main Shelves and Auxiliary Shelves

The main frame has two columns, and the subframe has one column, as shown in the following figure

Main Shelves

The main shelving has columns on both sides

Sub-Shelves

One side of the auxiliary shelving has columns

stable and firm

Not easy to install

Prone to damage

Heavy Duty Warehouse Rack

1.High-quality materials

Choose high quality steel to ensure the strength and durability of the shelf and extend the service life.

2.Exquisite craftsmanship

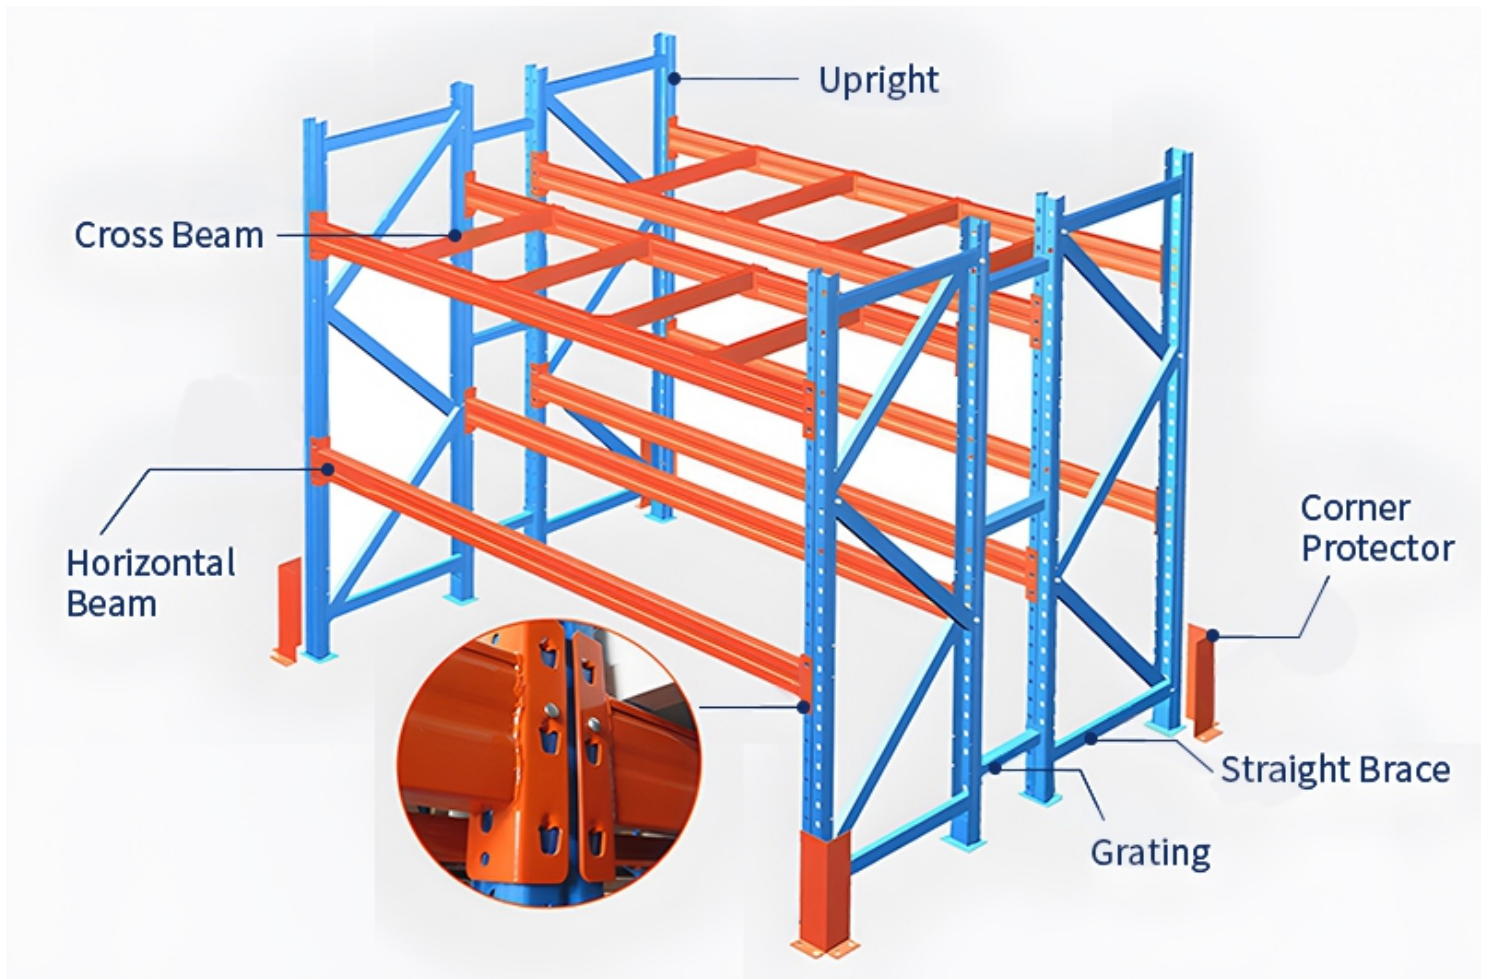

The use of advanced production technology and strict quality control system to ensure the accuracy and stability of the shelf.

3.Customized services

According to the customer's warehouse space, goods characteristics and storage needs, to provide personalized design, to maximize space utilization.

4.Perfect after-sales service

Provide shelf installation guidance, maintenance training and timely after-sales response to solve customers' worries.

Heavy-duty shelves are the most commonly used of shelves, usually have a larger carrying capacity and high stability, suitable for all kinds of large warehouses and logistics centers. The load capacity of heavy duty pallet steel frame is usually 1000-5000kg or even heavier. The height of each layer can be adjusted by itself, and the end and end can be connected infinitely to save costs.

Cantilever Racking

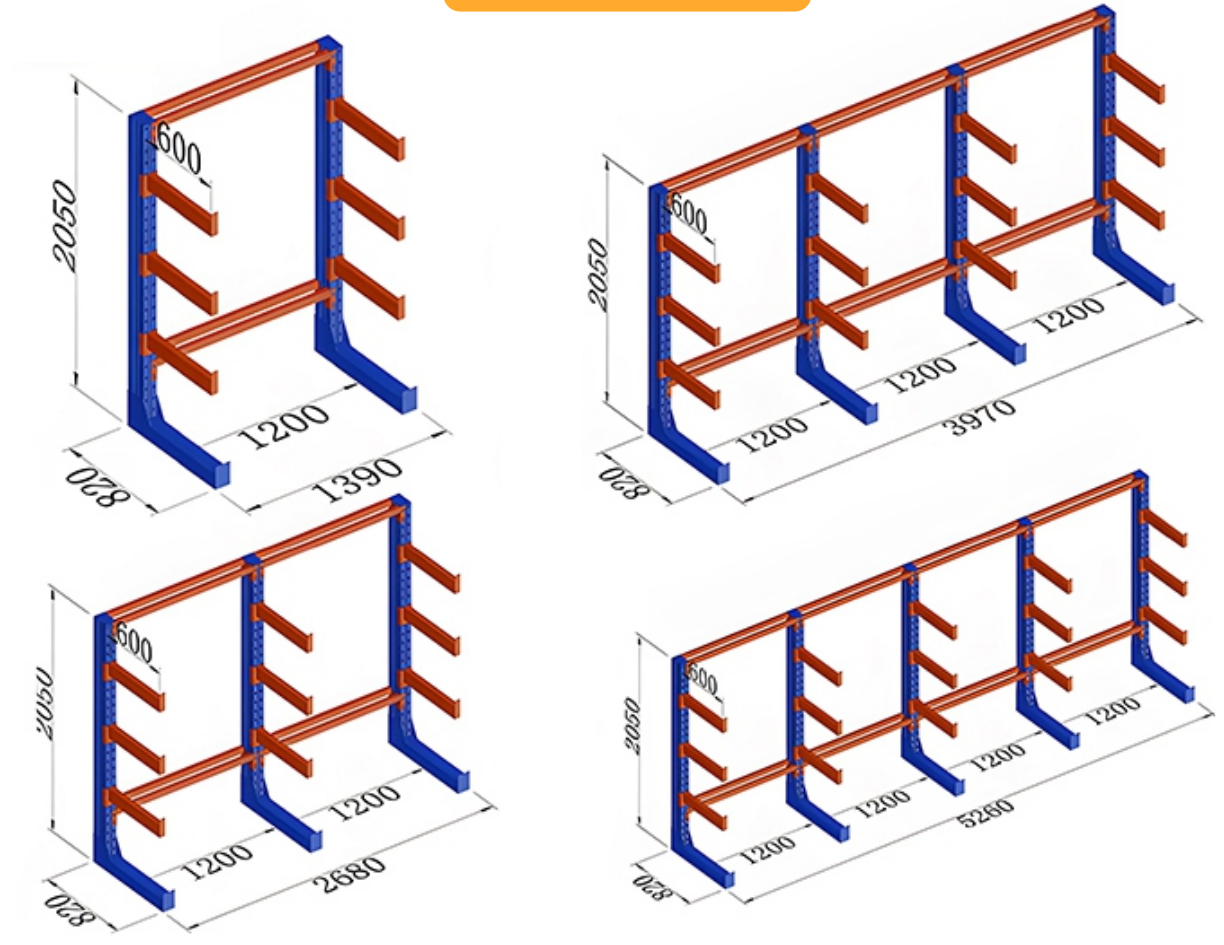

Cantilever shelf is one kind of special shelf structure composed of columns and cantilevers, which is mainly used to store long strips, plates, pipes and other irregular or long goods.

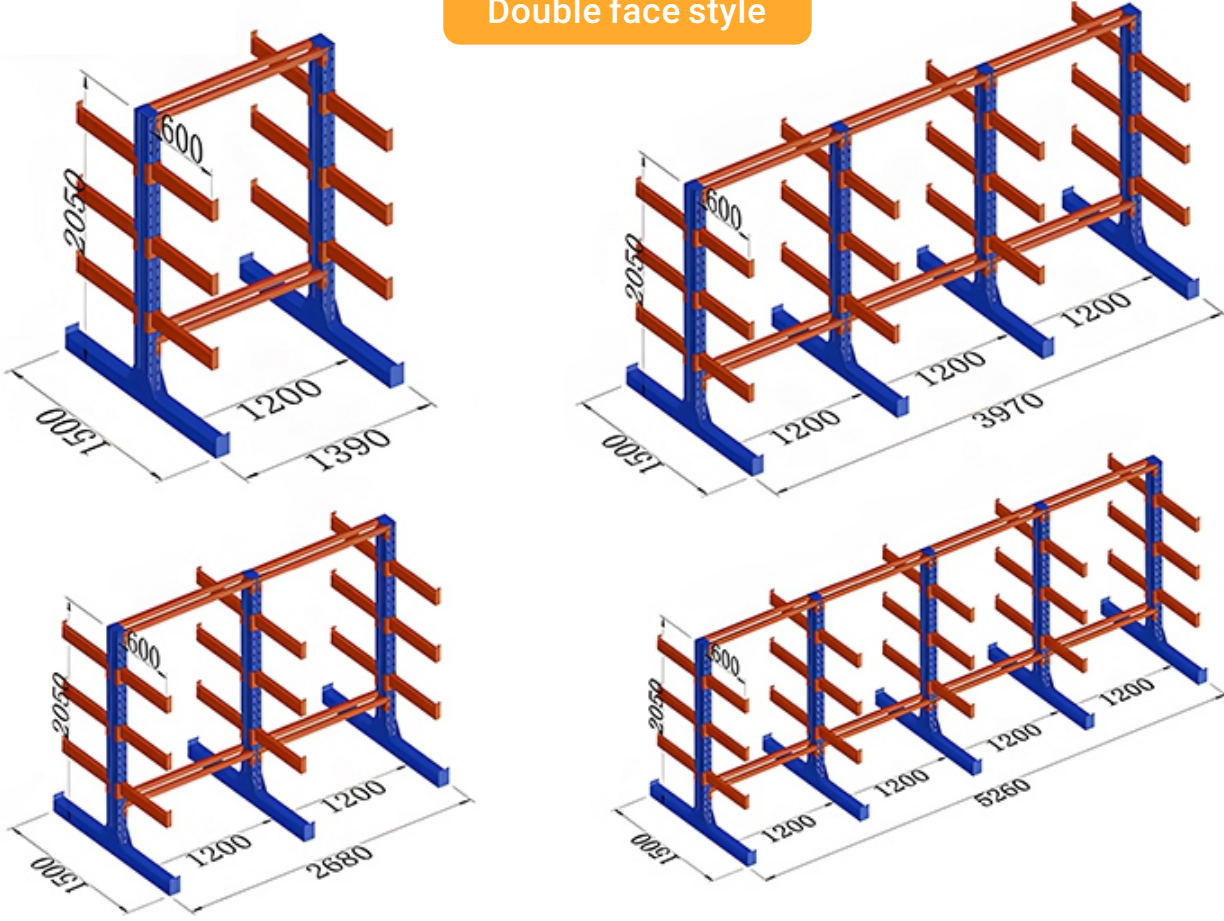

The cantilever shelf has the advantages of light structure, good load capacity and high space utilization. It can be flexibly designed and adjusted according to the characteristics and storage requirements of the goods, and adapt to different types and specifications of goods storage.

Brand Name	YIYI Warehousing	Surface	Electrostatic spraysurface
Place of Origin	Zhejiang, China	Thickness	Column:1.5mm,2.0mm
Material	High-quality steel	Product size	Customized
Product name	Cantilever Racking	Color	RAL System
Application Environment	Warehouse,Outdoors, Cold Room...	OEM&ODM	Support

Single face style

Double face style

1.Storage flexibility

The cantilever can be adjusted according to the length of the goods, which can adapt to the storage of goods of different lengths and make full use of the warehouse space.

2.Unique structure

The unique cantilever design enables the shelf to store goods on one or both sides, and the layout is flexible

3.Strong load capacity

Able to withstand heavy cargo, suitable for storage of heavy long goods
For example. when storing large steel beams, it can ensure the stability and safety of the shelf

4.Improve space utilization

Make full use of the vertical space of the warehouse and increase the storage capacity
For example, in higher warehouses, multi-layer cantilever shelves can be built to improve the efficiency of space utilization.

Light Warehouse Rack

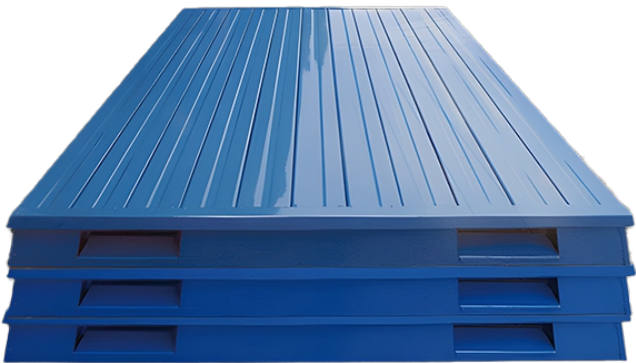

Light shelf is the kind of common storage equipment, occupies an important position in many storage solutions.

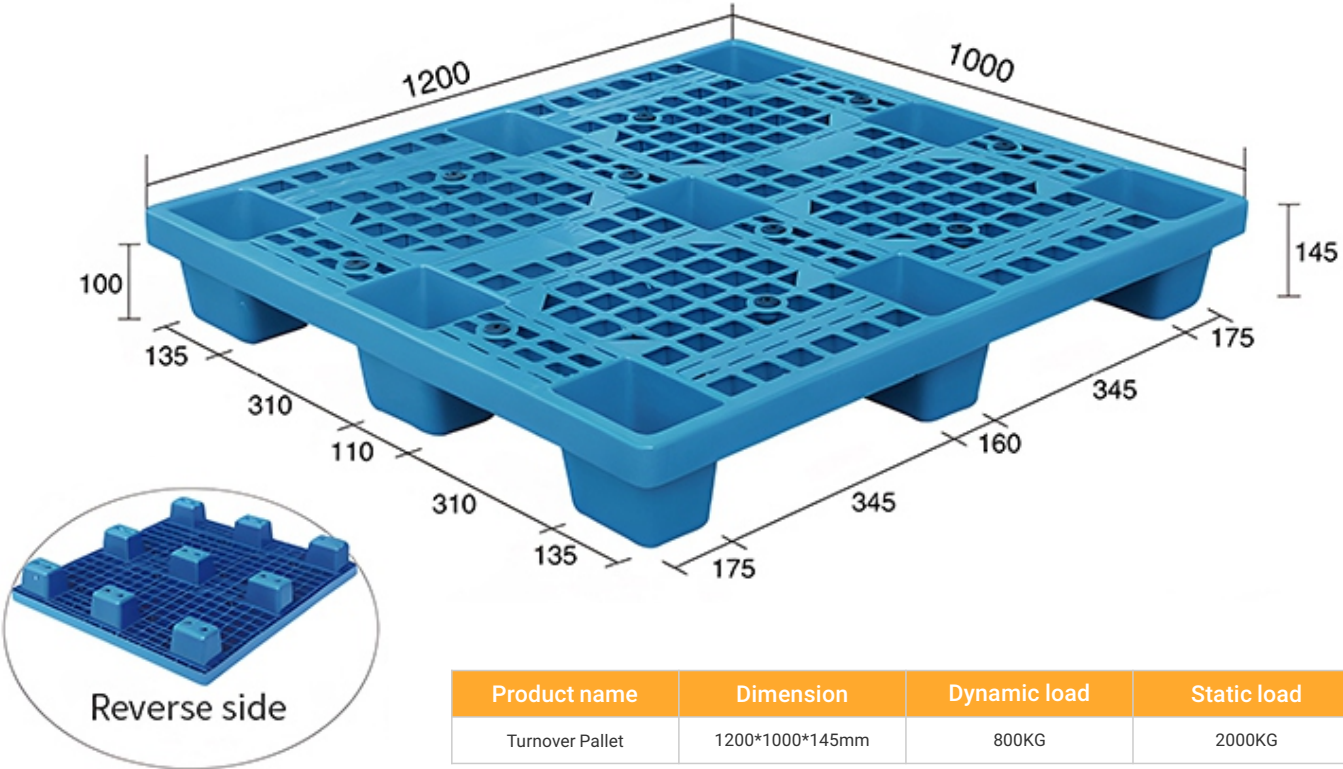

In practical applications, light shelves can be used in factory workshops, e-commerce warehouses, offices and other places. it can effectively classify and organize the goods, improve the efficiency of warehouse management, and facilitate the storage and inventory of goods. Whether it is a small business or a local area of a large warehouse, light shelves can play a unique role in providing convenient and efficient support for warehousing work.

Brand Name	YIYI Warehousing	Surface	Electrostatic spraysurface
Place of Origin	Zhejiang, China	Thickness	Carton Packing
Material	High-quality steel	Product size	Customized
Product name	Cantilever Racking	Color	RAL System
Application Environment	Warehouse,Outdoors, Cold Room...	OEM&ODM	Support

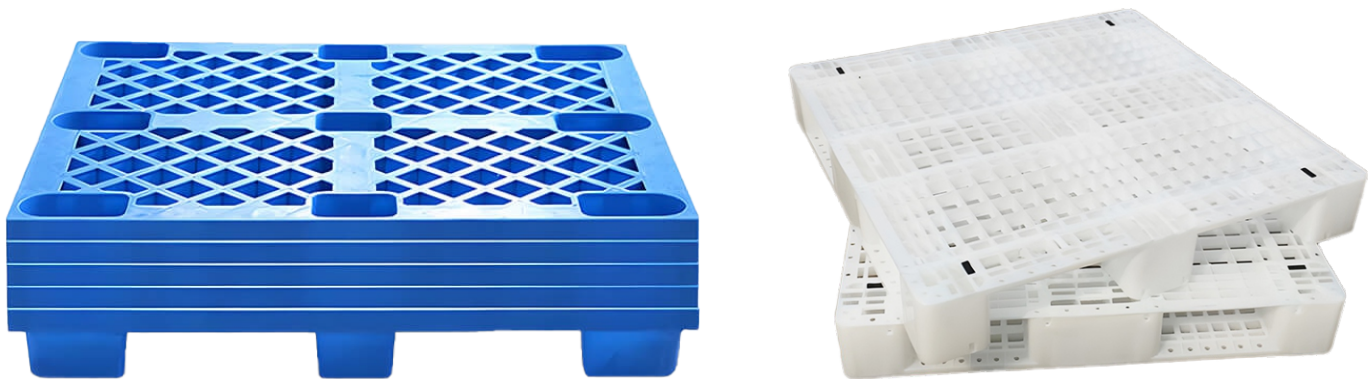

Turnover Pallet

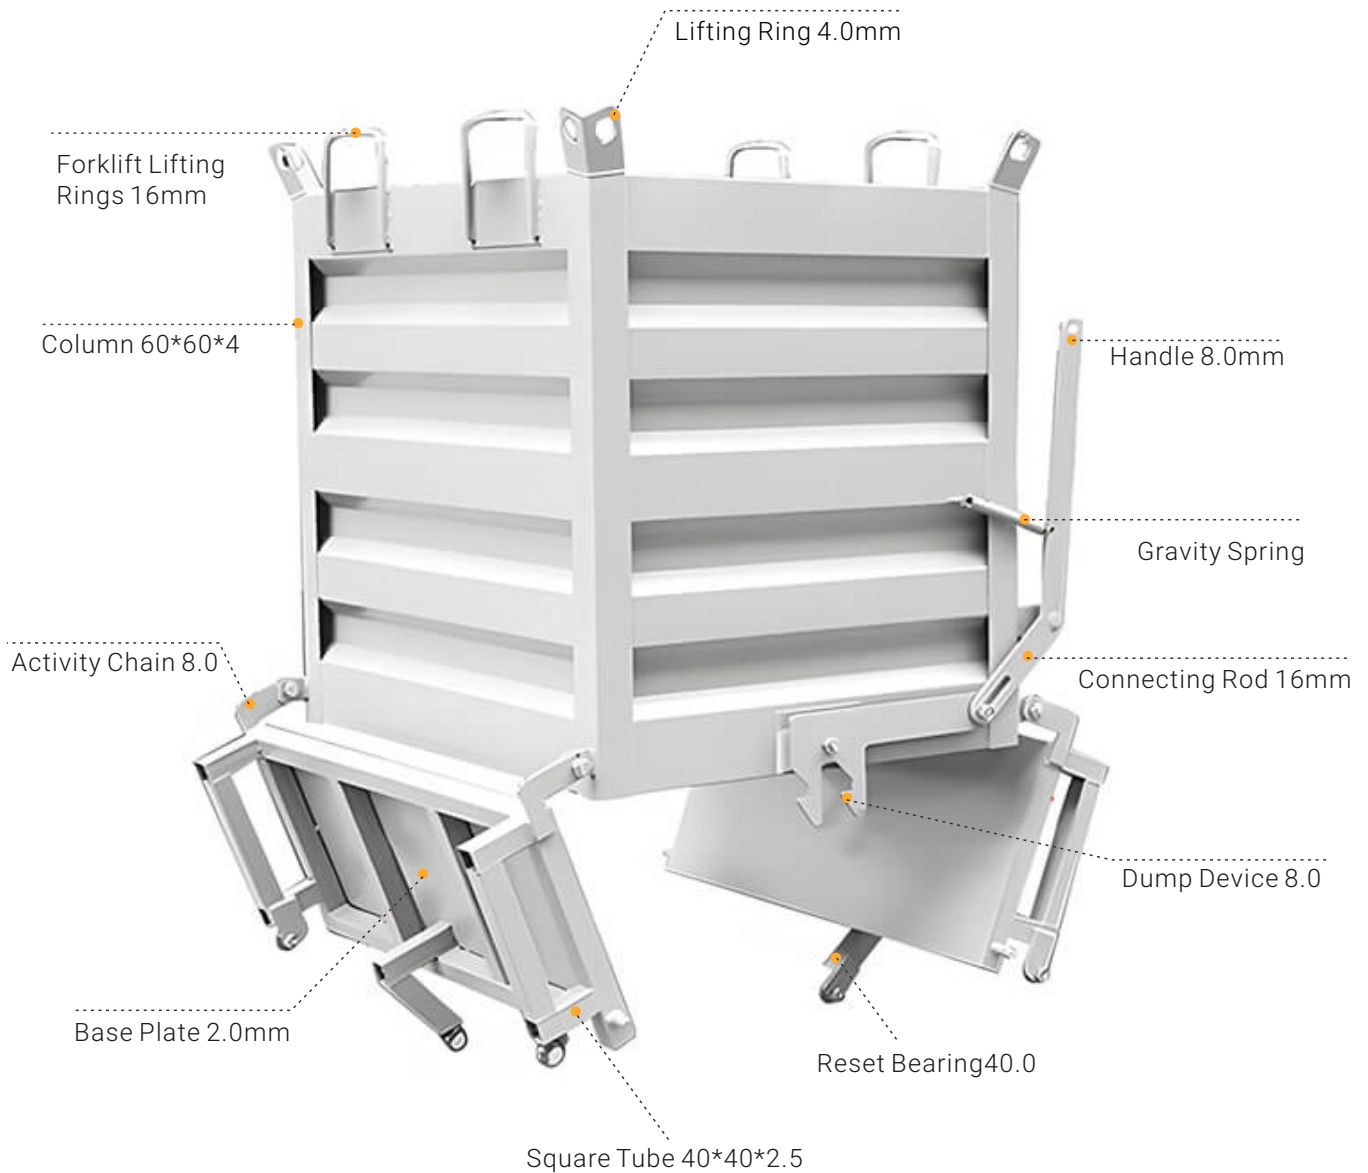

Brand Name	YIYI Warehousing
Place of Origin	Zhejiang, China
Material	High-quality steel
Product name	Stacking Warehouse Rack
Application Environment	500-5000kg/layer
Dynamic Load	Electrostatic spray surface
Logo	Customized
Product size	Customized
Color	RAL System
OEM&ODM	Support

The turnover plastic pallet is the one of many pallet types and has been widely used in the modern logistics industry. It is mainly made of high-quality plastic material, which gives it a series of unique advantages. First of all, the plastic tray is light in texture. which is convenient for manual handling and operation, and reduces labor intensity. Secondly, it has good corrosion resistance and can be used for a long time in harsh environments such as humidity, acid and alkali without being damaged. In practical application, the turnover plastic pallet can realize the standardized storage and management of goods in the storage link and improve the utilization rate of warehouse space. In the process of transportation, it can perfectly cooperate with forklifts, pallet trucks and other equipment to improve the efficiency of loading, unloading and transportation. On the production line. it is convenient for the circulation and transportation of goods to ensure the smooth production process.

Metal Turnover Box

1. High strength and durability

Made of metal, strong structure, able to withstand frequent use and heavy cargo, long service life.

2. Good carrying capacity

Can carry a large number of goods to meet the needs of large-scale logistics and warehousing.

3. High reusability

As long as proper maintenance, can be used repeatedly, reduce costs.

4. Easy to customize

It can be customized according to special needs, such as adding special fixtures or changing the size.

5. Good stability

It is not easy to dump during handling and stacking, ensuring the safety of goods and personnel.

Metal turnover box is an important instrument of modern logistics and storage.

It is generally made of high-quality steel, strong structure. can withstand heavy pressure. Regular appearance, easy to stack, save space.

Excellent protective performance, can effectively protect the goods from damage and pollution, good sealing can be moisture-proof.

There are a variety of specifications and capacity options, but also can be equipped with a divider to facilitate the classification of goods.

Widely used in automobile manufacturing, mechanical processing, electronic appliances and other industries. For example, storing parts in automobile factories and placing finished tools in mechanical processing plants.

Because of its strong, good protection, and many specifications, it plays an important role in logistics and warehousing.

Material	Cold rolled steel
Color	Galvanized

- Space optimization : Designed to improve space utilization in a warehouse or storage area.
- Tightness : Encrypted mesh to prevent leakage of small volume items.
- Structural Stability : Upgraded welding technology with fully welded reinforcement.
- Durability : Use of high strength materials such as carbon steel or stainless steel to resist daily wear and tear.
- Highly ventilated for airflow

Stacking Racks Shelves

Stacking Racks are a flexible and cost-effective storage solution for a variety of storage environments with different needs. These racking systems usually consist of sturdy metal frames or pallets that can be stacked on top of each other to increase storage space. They are designed to store products that do not fit into traditional pallet racking or shelving units.

Can be used with a variety of shelves With tray function

- **Durability :** Able to withstand the wear and tear and stress of long-term use
- **Stability :** Designed to ensure stability when stacked, preventing tilting or collapsing
- **Flexibility :** The number of tiers and layout can be quickly adjusted as space and needs change
- **Space saving :** Stacked design maximizes the use of vertical space and reduces footprint
- **Easy to assemble and disassemble :** Can be easily assembled and reconfigured without complex tools
- **Cost Effective :** Lower initial cost compared to fixed shelving
- **Versatility :** Suitable for a wide range of storage needs, including tools, files, merchandise, etc
